TECHNICAL BULLETIN

TYPE: Horizontal In / Vertical Upflow installations only
MODEL: Dry-Flo™ L5C Coalescer-Separator
 TB No. S3550 Date 1-99

The Model "L5C" Coalescer-Separators are designed for horizontal inlet and vertical up flow installations. These separators use a two stage separation process. Stage one utilizes a wire mesh pad that increases the size of the droplets as they travel through the pad. In stage two a stainless steel Separating Tuyere Diffuser causes the stream to enter a controlled centrifugal flow. Due to the centrifugal motion, entrained liquids and solids are directed to the outer walls of the separator. Re-entrainment breaker plates create a quiet inert zone to prevent liquid from reentering the flow stream once separation has taken place.

With correct sizing and proper drainage, these separators are designed to eliminate 99% of all entrained liquids and particles that are 5 microns and larger in size.

Model "L5C" Coalescer-Separators can be fabricated from carbon steel or stainless steel and are manufactured in accordance with ASME Code Section VIII Division I. As a standard, these separators come with the ASME Code "U" Stamp.

DESIGN PRESSURE 150 PSI @ 450° F / DIMENSIONS AND WEIGHTS

PIPE SIZE	A	B	C	DIA.	E	NPT DRAIN	WEIGHT lbs.
